

# Unlocking Transportation and Logistics Excellence

How ProcessWeaver® for SAP by Elemica Delivers Unmatched ROI

Tap into the transformative power of automated processes, real-time freight calculations, and comprehensive reporting to streamline your logistics operations

ProcessWeaver® for SAP by Elemica, the leading multi-modal and multi-carrier shipping execution solution for global value chains, empowers businesses to streamline transportation management and shipping execution processes by eliminating, automating transportation execution, and enhancing order and shipment tracking.

Replacing manual processes or outdated systems to enable rating, routing, and shipping from a single platform, organizations are able to realize significant time and cost savings, while real-time freight calculations and feedback reduce freight costs eliminating discrepancies and optimizing carrier selection. ProcessWeaver® also supports mode conversion to minimize transportation costs while maximizing service levels.

The centralized SAP-based architecture eliminates the need for standalone third-party systems, reducing support and training costs. This streamlined solution improves global shipping management and compliance with legal regulations, further contributing to the platform's value, making it a comprehensive solution for multi-carrier and multi-modal requirements.

## Improvements Delivering Meaningful ROI

### WHEN YOU

Reduce shipping errors

### YOU CAN

Boost customer satisfaction and grow sales

### WHEN YOU

Automate shipping processes

### YOU CAN

Reduce operational costs and transportation spend

## Native SAP Footprint

Performing the manifesting/shipping from within the SAP footprint eliminates extraneous interfaces, third-party black box systems, and additional hardware or software. This eliminates the need to replicate master or transactional data, reduces support and training costs, cuts processing time, and provides a single platform architecture across the enterprise.

## Communications and Integration

Reduce the strain on IT teams and improve communications through real-time tendering with carriers and by eliminating third-party black box systems, additional hardware, database software, mapping requirements, and data replication.

## Real-time Freight Calculation

Eliminate freight discrepancy nightmares and enhance accurate communication across the enterprise. True rate comparisons across all modes not only enable correct carrier selection but also reduce freight costs.

## Visibility

Cut cycles between customer service and warehouse personnel across your enterprise. As the shipment is manifested in the warehouse from within SAP, the tracking information is automatically updated and available for customer service and others within the organization.

## Shipping Process Improvement / Automation

Transportation activities can be manual and labor intensive. ProcessWeaver® is designed to support best-of-breed transportation processes from within SAP and provide a proactive and manage-by-exceptions environment. The resulting improvements in operations and administration free up resources for other cost-reducing and revenue-generating activities.

## Proof of Delivery

ProcessWeaver® captures POD signatures, as well as date and time, providing detailed backup and allowing companies to accrue revenues quicker and with more confidence.

## Carrier / Route Determination

Determine the optimal carrier/route based on customer preference or your company preferred carrier. Advanced routing guides give teams the ability to automate carrier and service selection based on configurable business rules, resulting in freight cost reductions and delivery service improvements.

## Compliance

Achieve regulatory compliance, customs and dangerous goods requirements, and emissions targets.

Fewer errors, automated processes, better tracking, enhanced visibility, simple compliance. **That equals transportation management ROI that's easily measurable, all within your SAP system landscape.**
